

F-2012-00217 - Unstimulated Donor Insemination success rates

02 October 2012

Summary of request

The Authority was asked to provide information regarding the number of un-stimulated Donor Insemination cycles the patients at London Women's Clinic who had live births as a result of this treatment underwent before their successful cycle.

HFEA response

Please see Table 1 below.

Table 1

Count of previous un-simulated DI treatment cycles	Cycles that resulted in a live birth
0	9
1	6
2	<5
3	<5
4	<5
5	<5
6	<5
7	<5
Total number of births	23

Table 1 shows the number of cycles that resulted in a live birth and how many previous cycles those patients had. For example 9 of the 23 births resulted from the first cycle of un-stimulated DI treatment, 6 from the second and so on. We do not give more details than '<5' when the numbers become small to avoid the possibility of disclosing information that might be used to identify a patient.
