

The Patients' Guide to IVF Clinics Provisional Data 2002

Glossary of terms

Abandoned cycle

In IVF where a treatment cycle is cancelled after commencing administration of drugs, but at any stage before embryo transfer.

Assisted hatching

The mechanical, chemical or laser breaching of the gelatinous coating of the egg.

Cervical mucus

The secretions surrounding the cervical canal. The amount and texture changes during ovulation to allow sperm penetration.

Counselling

All licensed clinics are required to offer patients counselling. Such counselling aims to enable the patient to understand the implications of treatment, to give emotional support and to help the patient cope with the consequences of treatment.

Cryopreservation

The storage of gametes or embryos by freezing at low temperatures.

Donor Insemination (DI)

The insemination of donor sperm into the vagina, the cervix or the womb itself.

Egg collection

Procedure by which eggs are collected from the woman's ovaries by using an ultrasound guided needle or by using a laparoscope (an instrument for looking into the abdomen) and a needle. Also known as egg retrieval.

Embryo

A fertilised egg up to eight weeks of development.

Embryo freezing

Embryos not required for treatment in a cycle can be frozen and stored for future use. Freezing is also known as cryopreservation.

Embryo transfer

Transfer of one or more embryos to the uterus.

Embryo storage

The storage of one or more frozen embryos for future use.

Endometriosis

A female condition in which endometrial cells, which normally line the uterus, implant around the outside of the uterus and/or ovaries, causing internal bleeding, pain and reduced fertility.

Epididymis

Coiled tubing outside the testicles which store sperm.

Fallopian tube(s)

The tubes between the ovaries and the uterus. After release of the egg from one of the ovaries, the tube transports the egg to the uterus.

Fetus

The term used for an embryo after the eighth week of development until birth.

Follicle(s)

A small sac in the ovary in which the egg develops.

Gamete

The male sperm or the female egg.

Gamete Intra Fallopian Transfer (GIFT)

A procedure in which eggs are retrieved from the woman, mixed with sperm and immediately replaced in one or other of the woman's fallopian tubes so that they fertilise inside the body.

Gonadotrophins

Drugs used to stimulate the ovaries similar in composition to natural follicle stimulating hormone (FSH) produced by the pituitary gland

Hamster test (HEPT)

A test of the fertilising ability of human sperm by observing their penetration into the hamster egg.

HFEA

Human Fertilisation and Embryology Authority.

Intra Cytoplasmic Sperm Injection (ICSI)

A variation of IVF treatment where a single sperm is injected into the inner cellular structure of the egg.

Intrauterine Insemination

Insemination of sperm into the uterus of a woman.

In Vitro Fertilisation (IVF)

Eggs and sperm are collected and put together to achieve fertilisation (IVF) outside the body.

Live birth

The delivery of one or more babies.

Live birth rate

The number of live births achieved from every 100 treatment cycles commenced.

Menstrual cycle

A cycle of approximately one month in the female during which the egg is released from an ovary, the uterus is prepared to receive the fertilised egg and blood and tissue are lost via the vagina if a pregnancy does not occur.

Microsurgical Epididymal Sperm Aspiration (MESA)

Retrieving sperm directly from the epididymis.

Multiple birth

Birth of more than one baby from a pregnancy.

Multiple birth rate

This is the percentage of all births in which more than one baby was born.

Multiple pregnancy

This is the percentage of all pregnancies in which two or more fetal hearts are present.

Natural/Unstimulated cycle

No drugs were given to stimulate egg production.

Neonatal death

The death of a baby within 28 complete days of delivery.

Ovarian Hyperstimulation Syndrome (OHSS)

A serious complication following stimulation of the ovaries with gonadotrophin drugs.

Ovary

One of a pair of female reproductive organs which produce eggs and hormones.

Partial Zona Dissection (PZD)

A variation of IVF treatment in which a small hole is made in the outer membrane of the egg using a small glass needle, thereby easing the passage of sperm into the egg under their own motion.

Percutaneous Epididymal Sperm Aspiration (PESA)

Retrieving sperm directly from the coiled tubing outside the testicles that store sperm (epididymis) using a needle.

Preimplantation Genetic Diagnosis (PGD)

Techniques by which embryos fertilised *in vitro* are tested for specific genetic disorders (e.g. cystic fibrosis) or other characteristics such as sex before transfer to the uterus.

Glossary of terms continued over ▶

◀ Glossary of terms continued

Preimplantation Genetic Screening (PGS)

Preimplantation screening refers to techniques whereby certain categories of patient, thought to be at a higher than average risk of conceiving abnormal embryos, have their embryos tested to determine whether any embryo is affected. The purpose of preimplantation genetic screening (PGS) for aneuploidy (numerical chromosomal abnormality) is to help those seeking treatment to produce healthy children and to reduce the risk of miscarriage.

Pregnancy rate

The number of pregnancies achieved from every 100 treatment cycles commenced.

Spermatid

An immature sperm cell.

Stillbirth

The birth of a dead infant.

Stimulation drugs

Drugs used to stimulate a woman's ovaries to produce more eggs than usual in a monthly cycle; also known as superovulatory drugs.

Stimulated cycle

A treatment cycle in which stimulation drugs are used to produce more eggs than usual in the woman's monthly cycle.

Superovulation/stimulation

The stimulation of a woman's ovaries with drugs to produce more eggs than usual in a monthly cycle.

Testicular Sperm Extraction (TESE)

Retrieving sperm directly from the testis.

Testis

Testicle or male gonad.

Treatment cycle

- a) IVF with fresh embryos: a cycle begins with the administration of drugs for the purpose of superovulation or, if no drugs are used, with the attempt to collect eggs;
- b) IVF with frozen-thawed embryos: a cycle begins with the removal of the stored embryo in order to be thawed and then transferred;
- c) DI: a cycle begins when the first insemination with donor sperm takes place.

Unknown outcome

The outcome of a clinical pregnancy is unknown due to incomplete information being returned by a clinic to the HFEA.

Zona drilling (ZD)

Acid released to dissolve the gelatinous coating of the egg leaving a hole through which the sperm can enter.

Introduction

This booklet contains details of all clinics licensed by the HFEA for *in vitro* fertilisation (IVF) treatment including Intra Cytoplasmic Sperm Injection (ICSI), and contains important information to consider when choosing a clinic. The following pages should be read together with *The Patients' Guide to Infertility and IVF*. This booklet shows the treatment data for the period 1 April 2000 to 31 March 2001.

Patients are advised to contact clinics directly for further information and their most recent results. The HFEA has given instructions to licensed clinics on what information to give patients about their treatment and live birth rates.

Choosing the clinic for you

Your decision on the best clinic for you should not be based solely on the live birth rate. You should also consider: the treatments offered; how comfortable you feel with the staff and the surroundings; what information and counselling is offered; the cost; and the location of the clinic. Take your time before you make a final decision and explore all the available options.

The live birth rate shown in the following data tables is that obtained by the clinic for all its treatments involving fresh, stimulated IVF (including ICSI) using patients' own eggs. It does not reflect an individual couple's specific chance of achieving a live birth. This can only properly be considered in consultation with your specialist.

Understanding the live birth rate

This Guide uses three different stages of the treatment cycle to show the birth rate. This is calculated as the number of live birth events (twins and triplets count as one live birth event) divided by the number of:

- treatment cycles started
- egg collections
- embryo transfers

These may be explained as:

Treatment cycles started

The live birth rate per "treatment cycles started" includes all relevant treatments (fresh stimulated IVF/ICSI using patients' own eggs) given by a clinic. This gives the lowest live birth rate of the three stages as it includes cycles where patients failed to produce eggs or treatment cycles that were abandoned before eggs were recovered due to the risk of OHSS

Egg collection

The live birth rate per egg collection reflects a number of factors. These include: ovarian stimulation; the number of eggs recovered; fertilisation rates; the quality of the embryology; and the embryo transfer technique.

Embryo transfer

The live birth rate per embryo transfer rate (regardless of the number of embryos replaced) reflects only the quality of the embryology and the embryo transfer technique. The nearer this rate is to the live birth rate per egg collection the better. The data for embryo transfer is split into four categories: combined IVF and ICSI; IVF only; ICSI only and frozen embryo replacement. Data showing frozen embryo replacement is shown as IVF and ICSI combined and does not include cycles that were abandoned before embryo transfer because, for example, the embryos were not viable on thawing.

Contacts

Information and advice about fertility treatment is available from your GP or consultant and from the doctor, nurses and counsellor at the licensed clinic. Each clinic produces its own patient information, describing the services available and explaining what is involved in treatment.

In addition, information is available from the following organisations.

Patient organisations

CHILD

(The National Infertility Support Network)

Provides factsheets, a quarterly magazine, publications, medical advice and emotional support including helplines, local groups and local and national meetings. email: office@email2.child.org.uk www.child.org.uk

ISSUE

(The National Fertility Association)

Members receive independent individual support and information. Members and non members alike can telephone for help. Callers are answered personally 24 hours a day. Confidential telephone counselling by qualified counsellors is available to all every weekday evening. www.issue.co.uk

Daisy Network

Premature Menopause Support Group

Support group for girls and women who suffer early ovarian failure. Exchange information on IVF, HRT and on ways to

have a family through egg donation, surrogacy or adoption. Provides informal telephone counselling by members and quarterly newsletter.

They can be contacted at: P.O. Box 392, High Wycombe, Bucks, HP15 7SH

You can call Monique Francis on 01628 473446 (evenings) or 0181 569 1234 ext 2648 Mon, Wed, or Friday (office hours)

Donor Conception Network

Provides contact and support for those who have children, or plan family creation, conceived using donated gametes www.dcnetwork.org

Miscarriage Association

Provides support and information on the subject of pregnancy loss. www.the-ma.org.uk

National Childbirth Trust (NCT)

Offers information and support in pregnancy, childbirth and early parenthood. They aim to give every parent the chance to make informed choices. www.nctpregnancyandbabycare.com

National Endometriosis Society

Provides a helpline, local groups and clubs, a newsletter and other publications, workshops and conferences. www.endo.org.uk

National Infertility Awareness Campaign (NIAC)

A lobbying organisation campaigning for NHS funding for all infertility treatment on an equal basis across the UK. Gives advice on the current situation with regard to NHS funding and on campaigning/lobbying activities. www.repromed.co.uk/niac

Twins & Multiple Births Association (TAMBA)

Provides support for families with twins, triplets or more, and for professionals involved with their care. Network of local Twins Clubs, specialist support groups, publications and an information pack. www.tamba.org.uk

See over for other organisations ▶

◀ Contacts (continued)

Other Organisations

British Infertility Counselling Association (BICA)

BICA aims to promote high quality, accessible counselling services for people with fertility problems. The Association offers information to patients who are seeking details of counsellors specialising in infertility.
www.bica.net

Multiple Births Foundation

Provides professional support and information about all aspects of multiple births.
www.multiplebirths.org.uk

Progress Educational Trust

Provides information on fertility and genetics, and promotes discussion on their ethical and

legal implications. Publishes a news journal, 'Progress in Reproduction'.

Address and Contact
Clinic contact details

Licensed for
Licensed treatment services provided by the clinic.

Below 38 and all ages
On average, older women have a reduced chance of having a live birth. To fairly represent clinics treating relatively large numbers of older women, two live birth rates per treatment cycle are given: one for all women and another for women below the age of 38.

Treatment cycles started
(Fresh stimulated cycles using patients own eggs)
Number of treatment cycles started by women

At egg collection
(Fresh stimulated cycles using patients own eggs)
Number of treatment cycles reaching egg collection (IVF & ICSI)

At embryo transfer
(Fresh stimulated cycles using patients own eggs)
Number of treatment cycles reaching embryo transfer (IVF & ICSI)

IVF only
(Fresh stimulated cycles using patients own eggs – per embryo transfer) Number of treatment cycles reaching embryo transfer (IVF only)

ICSI only
(Fresh stimulated cycles using patients own eggs – per embryo transfer) Number of treatment cycles reaching embryo transfer (ICSI only)

Frozen embryo replacements
Number of treatment cycles using frozen embryo transfer (IVF & ICSI)
