

F-2013-00135 - Outcomes of donors under 25 and drugs used at time of donation

01 August 2013

Summary of request

The Authority was asked for data on the outcomes of donors aged under 25 and information on the stimulatory drug and the ovulation trigger drug used during each treatment, as well as the Recipient β hCG.

HFEA response

The HFEA does not collect and therefore does not hold information on these areas of treatment. Please find attached a table of the data we do hold. We have banded and grouped together some information in order to protect the anonymity of patients to whom the HFEA owes a duty of care as set out in the Human Fertilisation and Embryology Act.
