

## **F-2012-00174 - Cases of PGD misdiagnosis 1995-2012**

31 July 2012

### **Summary of request**

The Authority was asked for information regarding PGD misdiagnosis where a pregnancy was subsequently achieved between 1995 and 2012.

### **HFEA response**

A search of the HFEA's incident database shows that there have been three incidents reported to the HFEA of PGD misdiagnosis where a pregnancy was subsequently achieved. Two resulted in a live birth and one resulted in termination of the pregnancy. These reported cases concerned Mucopolysaccharidosis Type II, Tay-Sachs and a chromosome 15 rearrangement.
