

F-2014-00106 - Live birth data for 2009 for ICSI FET treatments at centre 0254

12 May 2014

Summary of request

The Authority was asked for live birth data for 2009 for ICSI FET treatments at The Agora Gynaecology and Fertility Centre (centre 0254).

HFEA response

The table below shows the requested data, and lists FET cycles that were subsequent to ICSI mixing events.

Centre name	The Agora Gynaecology and Fertility Centre
Year of treatment	2009
Original treatment type	ICSI
Treatment cycles	21
Pregnancies	<5
Birth events	<5

The cycles have not been broken down in to the standard age bands. This because there are few overall cycles and all bar 2 of the cycle counts by age would appear as '<5', to protect the anonymity of those to whom the Authority owes a duty of care. Additionally, as there is only 1 pregnancy and resultant birth, to display which age band it belonged to might also be a risk to patient anonymity.
